ADV4001—As with all 4000 series, the 4001 uses standard 50mm diameter posts and 60mm round rail for the top grab rail. The 4001 comes with a variety of picket types to suit the needs of the application. The pickets are welded into holes drilled into the top and bottom rails, giving great security and strength. The normal span for these as a balustrade is 1200 maximum, for fence use this can be greater.

Shown here is a 19x1.6 round picket, alternatively 16x1.5 for fencing and 25x3 round picket for balcony requirements is readily available.

We can make this in a height to suit your needs!

The 4000 series is available with a midrail to add impact, it can also be curved to suit different building styles. The picket infill can be bent or curved to add interest as part of the building.

Using contrasting colours will add interest to a house also, the balustrade can be a design feature, not just something you need for protection.

You may have design ideas yourself, discuss them with us and we can usually accommodate your design requirements.
