**ADV4300**—Is our unique balustrade and fencing system using extra strong 44x55 posts and a choice of top rails and infill types, with or without a midrail.

We designed this system to fill a need for a fully engineered balustrade solution that can be flat packed and easily erected by the do it yourself builder. It is flexible enough to handle either picket or glass infill and has the added advantage of being able to span greater distances between posts than many others.

No welding is required to fabricate or erect this balustrade, all you need is some basic tools and to follow the instructions provided.

**The 4300** series has options to use a midrail with pickets, or have them fixed straight to the top rail. Choose from a 19mm square picket, or a 65x16 rectangular paling, or select from a large range of glass colours and finishes to give your project just the look and feel it requires.

Because there is no welding, we can offer various components within the system in a choice of colours.

Call us, or visit our website for more information on this unique and flexible addition to our comprehensive range.
