ADV2001—This is ideal for a pool 1200 high fence, or as a decorative fencing any height. There is a huge range of glass types that can be used to give privacy or special decorator effects.

Compliant pool gates can be either framed or frameless glass, the choice is your.

A “Slumped glass” option allows for designer patterns in the glass and can be a real feature for small areas, giving privacy and appeal.

Using coloured or acid etched glass gives a different feel again, the choices are yours.

ADV2002 and ADV2003— These feature the same strong 44x55 rectangular posts as the ADV2001.

Posts can be epoxy fixed into core drilled holes in concrete, finished with a washer around the base of the post.

Alternative fixing is using our unique side fix bracket, which can be fixed to stair stringers or noggings. This gives flexibility and security.

Welded base plates can also be used when fixing to top of deck and into noggings.

ADV3003—As with all 3000 series, the 3002 uses our own 50mm diameter glazing posts and 60mm glazing rail for the top grab rail. The 3002 features a polished glass edge instead of a bottom rail. Other options with gaps to top rail and/or having a 60mm bottom rail are also available.

Shown here is tinted glass, one of the many glass options that can be used with all our balustrades to give that special effect needed for your important project.

The 3000 series when fitted into side fix brackets or epoxy fixed into concrete, utilises our strengthening spigot. This adds to the strength of the posts, ensuring compliance to codes, not all round posts are this strong.

ADV3005 is another option in our 3000 series. This one features 4 edge glazing.

4 Edge glazing gives the flexibility to use laminated glass as well as toughened glass, adding to the range of finishes in your palette, posts also spaced further.

Shown here is a laminated glass with a white interlayer giving privacy if required. We would always recommend glazing all edge when using laminated glass to reduce the incidence of delamination and discolouration.

Base plate fixing is another option for all our balustrades if needed

ADV4001—As with all 4000 series, the 4001 uses standard 50mm diameter posts and 60mm round rail for the top grab rail. The 4001 comes with a variety of picket types to suit the needs of the application. The pickets are welded into holes drilled into the top and bottom rails, giving great security and strength. The normal span for these as a balustrade is 1200 maximum, for fence use this can be greater.

Shown here is a 19x1.6 round picket, alternatively 16x1.5 for fencing and 25x3 round picket for balcony requirements is readily available.

We can make this in a height to suit your needs!

The 4000 series is available with a midrail to add impact, it can also be curved to suit different building styles. The picket infill can be bent or curved to add interest as part of the building.

Using contrasting colours will add interest to a house also, the balustrade can be a design feature, not just something you need for protection.

You may have design ideas yourself, discuss them with us and we can usually accommodate your design requirements.

ADV4200— This versatile old design has stood the test of time and is an economical picket balustrade for residential use.

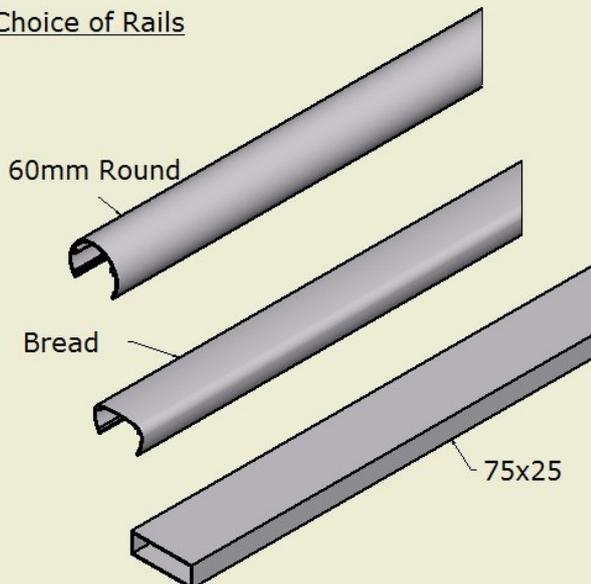

The 4200 series can have a mid rail (as shown) or have the pickets run through to the top rail.

Being punched and screwed and requiring no welding gives flexibility in the choice of colours for the various components.

The push in spigot feet allow for easy fixing using bolts, screws or chemical anchors.

Choice of Rails

A large choice in top rails.

Choose from a number of different top rails with this balustrade. Each gives a different look to the system.

Call us for a free measure and quote from plans, or, if in our area we will send a representative to measure from site

The series 4200 is only one of the styles we have in our large standard range. We can also custom design to meet your needs.

ADV4300—Is our unique balustrade and fencing system using extra strong 44x55 posts and a choice of top rails and infill types, with or without a midrail.

We designed this system to fill a need for a fully engineered balustrade solution that can be flat packed and easily erected by the do it yourself builder. It is flexible enough to handle either picket or glass infill and has the added advantage of being able to span greater distances between posts than many others.

No welding is required to fabricate or erect this balustrade, all you need is some basic tools and to follow the instructions provided.

The 4300 series has options to use a midrail with pickets, or have them fixed straight to the top rail. Choose from a 19mm square picket, or a 65x16 rectangular paling, or select from a large range of glass colours and finishes to give your project just the look and feel it requires.

Because there is no welding, we can offer various components within the system in a choice of colours.

Call us, or visit our website for more information on this unique and flexible addition to our comprehensive range.
